These instructions contain all the necessary information for the correct and safe use of the connectors (EN362) in the fields of activity. The connectors covered by these instructions are personal protection devices designed to be integrated in fall arrest personal protection systems such as harnesses, lanyards, and anchor devices. The connectors are a vital transmission component of the mechanical resistance between a proper anchor point and the user who accidentally fall. A malfunction due to improper use of the equipment is dangerous for the physical health of the user. The connector must be fitted in and kept updated by the user. If the connector is used – with the closing system locked – without any restrictions or other
